[📖 Cloud Computing]   [📖 Time Series Analysis]   [📖 Python]   [📖 Linear Programming]

Job description

As a Data Scientist in ReD, you will be responsible for providing simple and intuitive solutions to the most complex problems in renewable industry. This will involve building machine learning and deep learning models which are coupled with contextual business knowledge. You will work with a world-class team of site managers, subject experts, data engineers and data scientists to build the next generation data-driven renewable company.

Further responsibilities will include :

- Implement data science solutions which may involve machine learning or data science techniques to increase and optimize outputs

- Acquire extensive knowledge of renewables industry practices and implement tailor made techniques to solve problems relevant to the same

- Assess the effectiveness and accuracy of data sources and data gathering techniques

- Work closely with business and site teams to identify opportunities for leveraging data to drive business solutions

- Create data trails to monitor pre-define KRAs and work relentlessly to improve them

Our Ideal candidate :

- Good programming and logical skills

- Working knowledge of R or Python programming language. Exposure to distributed and cloud computing is a plus

- Knowledge of statistical approaches, incl. advanced machine learning techniques (e.g. Linear Regression, Logistic regression, Generalized Linear Model, Sampling Techniques, Time Series Analysis, Decision trees, Clustering, Principal Component Analysis, Factor Analysis, CART, Random Forest, Support Vector Machine, Gradient Boosting, XGBoost, Neural Networks, multivariate analysis, stochastic models, and sampling methods) andor optimization

- Excellent verbal and written communication skills

- Ability to learn and implement new technologies quickly

- Ability to uncover data trends to gain insights about expected behaviour and perform actions accordingly (prescriptive analytics)

- Strong critical thinking and problem-solving skills with an analytical mind-set and go-getter attitude

Programming skills :

- Basic knowledge of at least 1 programming language - Python or R

- Algorithms - Theoretical knowledge of at least 3-4 algorithms

## Data Scientist - Python/Time Series Analysis
Job Fittment Finder

Communication skills :

- Basic level of articulation of theoretical concepts

- Ability to communicate with cross functional roles is a plus

Teamwork :

- Displays ability to work both as an individual and as a self-motivated team player

- Has worked in large teams with an agile setup in the past

Role	Data Scientist
Industry Type	IT Services & Consulting
Functional Area	Data Science & Analytics
Employment Type	Full Time, Permanent
Role Category	Data Science & Machine Learning

Education

UG :	B.Tech/B.E. in Any Specialization, BCA in Any Specialization, B.Sc in Any Specialization
PG :	Any Postgraduate
Doctorate :	Doctorate Not Required

Key Skills

☆ Time Series Analysis   ☆ Python

Data Science   Data Scientist   Time Series Forecasting   Python programming   cloud computing

Machine Learning   Algorithm   Linear Programming

Skills highlighted with '☆' are preferred keyskills
